Re: Senior Backend Engineer

Dear Wattpad Hiring Team,

Your advertisement for the Senior Backend Engineer position aligns with my background, experience, values, and career goals. Wattpad enjoys a reputation of excellence, and I can bring an immediate contribution to its continued success. I feel confident that I can duplicate my track record as an ambitious, high-performing staff software engineer who possesses outstanding interpersonal, analytical, communication, decision-making, and problem-solving skills.

With over two decades of progressive experience within respected organizations, I have proved time and again my ability to leverage a breadth of expertise to lead the architecture and technical design of high-quality, large-scale, high-performing enterprise apps. As a proficient relationship builder and a trusted advisor to decision makers, I use my influencing skills to challenge the status quo, gain buy-in around innovative strategies, and align cross-functional activities with a common vision of success. Recognized as an engaging leader, I take pride in developing, inspiring, and mobilizing highly engaged teams around cultures of code quality and overall excellence, while building bridges between technical and non-technical groups and instilling positive and inclusive work environments.

Moreover, the pivotal roles I have played as part of a wide range of mission-critical endeavors have allowed me to further hone my skillset, including **expertise in Go (Golang), team mentoring and leadership, Agile software development life cycle, product development and management, data-based decision making and analysis, system and process optimization, technical knowledge sharing, testable and high-quality code delivery, and distributed systems**. Here is a selection of my career highlights as an example of what I intend to bring in my new role:

- *Led efforts in migrating legacy monolithic code from Python to new Go microservices, improving reliability and accelerating new client onboarding time from 4-5 weeks down to ~1 week.*
- *Developed a solution to successfully accelerate data retrieval load time from 2-5+ minutes to 1-2 seconds.*
- *Created an integration test framework that reduced the time required to maintain and add automated tests from 3-5 days to ~1 day*

My performance is always rated excellent, I am energetic and enthusiastic, and I possess a strong work ethic and an uncompromising commitment to the highest standards. Furthermore, I offer strong leadership and management skills, while being a flexible and collaborative team player who has found consistent success throughout his career by making good use of a variety of technologies.

I would welcome the opportunity of a meeting to discuss the position and my qualifications at a time that is suitable for you. Please contact me at 778-891-2305 or at simon@droscher.com.

Sincerely,

Simon Droscher
